

# eResept 2.12.2 (#7841)

## Release Notes

11.9.2013

## No component defined

---

Support for "What's new" text that can be included in new FM releases and will then be added to the FM inbox of every doctor (but only if inbox functionality is enabled).

[ RENO-6125 ]

The command timeout for schema update commands has been increased from 30 minutes to 1 hour. Some schema update scripts have been optimized to run faster

- 813 should now take less than 1 second to run

- 835 should run a little faster and it has been split up into multiple commands to reduce the likelihood of command timeout problems.

Note, that previous versions of these scripts that have been distributed by Thula are now obsolete and should not be used.

[ RENO-6131 ]

Fixed spelling errors in the prescription screen popup that asks a doctor if the standardavdeling should be updated.

[ RENO-6140 ]

Fixed a bug when creating preparation and specifying strength for an ingredient. The strength was not being saved to the database so the next time the preparation was opened/used there would be not amount or strength defined for the ingredient.

[ RENO-6142 ]

It is now shown which fields are required for ingredients when specifying a preparation.

[ RENO-6143 ]

The amount unit list is now filtered the same way as the strength unit list when specifying a preparation.

[ RENO-6144 ]

Medication search and prescription screen now default to the doctors default avdeling more often than before.

[ RENO-6145 ]

The patient banner now always shows information about the latest VIB confirmation recorded, ignoring the type of confirmation.

[ RENO-6151 ]

Renamed RF to Reseptformidleren where the user does a preliminary VIB confirmation.

[ RENO-6152 ]

When looking up kortdoses based on structured dosing, prefer kortdoses that contain a "+", e.g. prefer "1+1+1" over "1x3"

[ RENO-6271 ]

Fixed an error where M9.5 could be sent without samtykke in installations where the samtykke to download resepter from other doctors from RF is not saved in the database.

[ RENO-6273 ]
