

# eResept 2.12.8 (#8850)

## Release Notes

10.1.2014

## No component defined

---

Added configuration parameter to prevent assistants from directly creating a recall message (i.e. not as part of a renewal or seponation). This defaults to prevent assistants from doing this in hospitals only.

[ RENO-6816 ]

Assistants in hospitals can no longer print out aktuell LIB or VIB from the main screen, but they can now print out dagens e-resept without selecting a doctor. This functionality is unchanged outside hospitals.

[ RENO-6897 ]

The FM can now be configured to allow read-only users to call SkrivCave on the EPJ API.

[ RENO-6912 ]

Fixed a defect which prevented drafts made by assistants from being rejected after more then 24 hrs and made sure the undo loop used to reject assistants suggestions works as intended, i.e. undoes until consecutive assistants touch is no longer present.

[ RENO-7032 ]

LIB history and the dialog to print VIB and samstemming from LIB history now display preliminary VIB confirmations on admission.

[ RENO-7040 ]

Reason for prescribing a medication that is CAVE flagged is now shown in the LIB and resept historikk row detail.

[ RENO-7041 ]
