

Forskrivningsmodulen (e-resept) 2.13.2 (#9562)

Release Notes

28.3.2014

No component defined

Fixed a defect in SkrivBrukerInfo that prevented default avdeling from being saved when a new user was created.

[RENO-7657]

Fixed error that sometimes came up when receiving asynchronous messages in a multi-institution installation.

[RENO-7711]

Updated standard display of the KITH message head and of M1 messages to the 2014-03-25 version published by EISI.

[RENO-7715]

Information about a recent admission in a different institution is no longer shown in the patient banner in the FM and it is no longer to update admission and discharge VIB confirmations for such admissions.

[RENO-7738]
