

Forskrivningsmodulen (e-resept) 2.14.0 (#9652)

Release Notes

9.4.2014

No component defined

New window has been added in the admin UI for merging two databases.

There, the user can select the FM database to merge from and run a test to see the databases can be merged.

[RENO-7012]

A new operation in the FM Admin UI for merging two FM databases.

[RENO-7013]

Two patients can now be merged via the EPJ API, using the new SlaSammenPasienter method.

[RENO-7014]

Prescriptions coming in from a merge are now in italics.

When a patient has been merged. and/or there are items that have been added via a merge. with another patient the user is presented with a notification popup telling her/him that the patient is the result of a merge and that prescriptions coming in from that merge are shown using italics.

[RENO-7015]

Doctors can decide if a merged prescription should be a part of the vib via the "Godta"/"Avvis" buttons. These are about the only actions available on items resulting from a merge of databases. Rejecting a merged item is the same as stopping a regular item, but the action is undoable for most cases, merge items that come in as newly created drafts are removed on reject.

[RENO-7016]

LesVarerIBruk ignores items merged from another database and not yet approved after the merge.

[RENO-7017]

New column was added to "Andre forskrivninger" to indicate where items came from. Currently there are 5 possible sources : "Vib", "Utleverer", "RF", "EPJ" and "Ukjent".

[RENO-7018]

In medication search window (s11) the virkestoff and atc code columns in the results are now links which will initiate search by the values clicked. As a consequence users are now able to search by specifying a list of active ingredients, i.e. the search string "parac kod" or "kod parac" should give a list of medication with paracetamol and kodeinfosfathemihydrat as active ingredients in it.

[RENO-7222]

Removed configuration status from admin dashboard as it wasn't very informative, it was only reporting on the validity of the RF certificate.

[RENO-7467]

For Stavanger kurve printout the font has been made slightly larger for fields that could handle it.

[RENO-7554]

Fixed a defect in SkrivBrukerInfo that prevented default avdeling from being saved when a new user was created.

[RENO-7658]

Updated standard display of the KITH message head and of M1 messages to the 2014-03-25 version published by EISI.

[RENO-7730]
