

# Forskrivningsmodulen (e-resept) 2.14.3 (10080)

Release Notes

20.6.2014

## No component defined

---

When starting FM for the first time after an upgrade, FM will now wait to send a Verify message to RF until after the database schema upgrade has been run.

[ RENO-7586 ]

An assistant will no be able to undo registrations that were made by doctors. Now they can only undo registrations made by assistants.

[ RENO-7610 ]

Added kurve printout for Haraldsplass

[ RENO-7637 ]

Added doctors name and discharge date to preliminary admissions when copying vib to clipboard.

Added lines for Admissions and Discharges when this case applies, these lines will also have the doctors name and date.

[ RENO-7714 ]

The institution and avdeling is automatically set in the UI if the user has both this parameters configured correctly when the SkrivBrukerInfo is executed.

If the Institution and/or avdeling configured in the user do not exist in the local database, the UI will show both the comboboxes empty.

[ RENO-7716 ]

If a doctor rejects an ekspederbar resept that was added to a patient during a merge, the comment in the M5 is now «Resepten tilbakekalt som del av LIB gjennomgang».

[ RENO-7822 ]

An user without the "Administrer maler" privilege can not create personal templatler via "Rediger brukeinnstillinger"

[ RENO-7830 ]

Changed samstemming text for VIB confirmations when the patient was not admitted when the VIB was confirmed. The line line "Innleggelse den xx.xx.xx" will no longer appear everytime.

[ RENO-7834 ]

Read-only users will no longer have available the handle warning option.

The checkbox will no longer appear and the textbox with the description will be disabled.

[ RENO-7837, ]

Kurve printouts are now available for patients that were not admitted. The VIB still needs to have been confirmed and cannot have any changes prior to the last confirmation.

[ RENO-7838 ]

Fixed two problems with editing users in the admin UI

- Refresh problem when switching between users

- Timeout when loading the list of all users. The initial load should now be much faster.

[ RENO-7860 ]

In the resepthistorikk tab the user will now be able to see not only the Lib but also the Fib and Nib prescriptions.

[ RENO-7888 ]

When modifying the selected user if the user then chooses another one, an information popup will appear allowing the user to save changes. It will only appear when changes are effectively made.

[ RENO-7889 ]

The name and the id of the patient were added to the top right corner of the stavanger kurve report

[ RENO-7887 ]

Its possible select the source of information when confirming the VIB for non-admitted patients ("Other" confirmation)

[ RENO-7982 ]

Fixed an error that prevented the "Slå sammen databaser" window to be opened if there are any inaccessible databases on the database server

[ RENO-8128 ]

Fixed a problem when merging databases, the "Start merge" button did not work if no user mapping file was specified

[ RENO-8144 ]

Fixed a defect which caused an error popup when prescribing combination packages with no SPC information.

[ RENO-8240 ]

Fixed the column order of the Documents view which was not the same in all databases, depending on in which version of FM they were created. This fix enables merging of two databases that had different column order.

[ RENO-8266 ]

## EPJ API

---

The usage of EPJ API method StartPasient is now logged to a new database table called UsageLog. There is currently no UI for viewing this log.

[ RENO-7883 ]
