# Forskrivningsmodulen (e-resept) 2.14.6 (#11363)

Release Notes

30.1.2015

## No component defined

Bugfix for querying patient consent. FM was using the latest consent that was not expired to decide if the patient has given consent. So if a patient had and old consent that was not expired and a newer expired consent, FM would (wrongly) use the older consent. This has now been fixed, so that the latest consent is always used.
