# Forskrivningsmodulen (e-resept) 3.10.0 RC3 (#14671)

Release Notes

1.5.2017

## Customer Feature

Adresseregister credentials updated to new FM credentials for installations using the previous default credentials.

[ RENO-12729, Resolved, As the FM I want to use an updated Adresseregister username and password ]

## Customer Defect

When accepting stop proposals made in the past, the lib is properly updated.

[ RENO-12734 (127109), Resolved, Bug 127109: Accepting a seponering proposal does not work the day after the proposal was created ]

## Defect

Fixed error when fetching ak journal history by clicking the AK button in the patient banner.

[ RENO-12746, Resolved, Error occurs when opening AK history for a new AK medicine ]

Fixed eksperderbar prescription disappearing from AF when local resept is renewed to reg.

[ RENO-12745, Resolved, When renewing a prescription, with a specified stop date, to reg, the original prescription disappears form AF ]

Linkin failure fixed for a special case:
Linking items from a "varer i bruk" message (for multi dose patient) with deliveries (M25.3) during a "samstemming" session induced by LIB responsible doctor registration, could fail when the item being linked "behind" was already matched to an item in the message.

[ RENO-12731, Resolved, Linking as head of chain in samstemming causes problem when the linked to item has history item ]

Fixed expired and recalled locally known resepter shoing up in Andre Forskrivninger grid.

[ RENO-12614, Resolved, Recalled locally known resepter are showing in andre forskrivninger ]

Institution and Ward information moved to top/middle of header for more space

[ RENO-12610, Resolved, Should ward and institution be included when assistant prints LIB? ]
