

# Forskrivningsmodulen (e-resept) 3.4.15 (#10851)

Release Notes

21.10.2014

## No component defined

---

Fixed an XML validation error when sending M25.1 messages.

This happened when a v2.4 Helseperson or Organisasjon element had been stored as instituert av for a prescription.

Added a general check for HerId/HprId for Organisasjon/Helseperson when Rolle in M25.1 is constructed.
