Forskrivningsmodulen (e-resept) 3.4.18 (#11160)

Release Notes

9.12.2014

No component defined

Prescriptions coming in via M25.x and that are stopped are now included on the first M25.1 sent after LIB-ansvarlig registration. Note that this problem only occurred when the doctor imported the prescription in the samstemming (for non-LIB-ansvarlig) and then stop it before taking over as LIB-ansvarlig.

[RENO-9168]

When receiving SLV warnings, without any reference to medication, into the inbox, a show details button shows up, which displays the warning in more detail in a popup and marks item as read, if it hasn't been already.

[RENO-9397]

Fix question mark visibility in LIB row when all prescription question are answered.

[RENO-9413]

Change fest reference in legemiddelpakning to Legemiddelpakning/Id instead of varenummer.

[RENO-9434]

When the doctor answers "Yes" to seponating a free text kosttilskudd, the prescription no longer shows in «Andre forskrivninger».

[RENO-9460]

When more than one prescription unit is found for a drug, the user is now forced to select which unit to use. The FM no longer automatically selects the first unit found.

[RENO-9468]

Fix the possibility to switch to reg-i-lib after changing the prescribed medication or changing the package size.

[RENO-9477]

Fixed xml sorting when sending out M25.1 messages.

[RENO-9495]

Fix problem with M25.2/3 comments that would never disappear.

[RENO-9514]
