

Forskrivningsmodulen (e-resept) 3.5.10 (#12519)

Release Notes

7.12.2015

No component defined

A problem was fixed in processing M12 messages from Helfo. This would fail if the corresponding M2 message was sent in v2.4 (i.e. before updating to FM 3.5)

[RENO-10533]

When running a full FEST update, FEST records that have been marked as inactive locally by a previous FEST update, are reactivated if they are included in the new update.

[RENO-10759]

After updating to FM 3.5.10, a full FEST update is forced.

After a full update, this requirement will be reverted to allow incremental FEST updates. This reverting now also works correctly for automatic FEST updates, previously it only worked for manual updates.

[RENO-10760]
