Forskrivningsmodulen (e-resept) 3.9.1 (#14438)

Release Notes

31.3.2017

Customer Defect

Fixed a case where the FM could miss a, "not in RF" state for a "vib" item, leading to strange refresh issues, requiring the user to query RF more than once to get the correct state for items no longer in RF.

[RENO-12434 (erSak:12729), Resolved, (erSak:12729) RF status not updated correctly on first RF lookup, is updated correctly on second RF lookup]

When starting FM, the user will no longer be warned about there being unsent items on queue for a patient which has only unapproved drafts pending.

[RENO-12431 (erSak:12708), Resolved, (erSak:12708) Notification about unsigned resepter should not be shown for drafts]

SkrivCave will no longer update the local CAVE profile of the patient when the information coming in has not been been changed.

[RENO-12414 (erSak:12675), Resolved, (erSak:12675) VIB/CAVE flagged as updated after VIB confirmation, preventing printout of VIB or kurve]

Fixed a null reference error that would happen when renewing-with-change a 2.4 version of a prescription (or where a history item in version 2.4 exists) which contains a "forholdsregel" text.

[RENO-12390 (erSak:12650), Resolved, Null pointer exception when renewing with change a prescription with forholdsregel ved inntak]
