Forskrivningsmodulen (e-resept) 4.0.0 RC2 (#15491)

Release Notes

22.10.2017

Feature

When looking up in kj for patient with restricted access the user will get warning with information why the lookup failed

[RENO-13333, Resolved, As a user, I want to be notified if the patient has restricted access to his medication information in KJ]

The LesPasientStatus EPJ API method now checks if a patient has new/updated medication information in KJ.

[RENO-13149, Resolved, As the EPJ, I want to get patients with updated medications in KJ when calling LesPasientStatus]

Kjernejournal (KJ) is now a new source value in the label below the resept status in samstemming

[RENO-13338, Testing, As a user, I want to see in samstemming if a prescription was received from KJ]

In samstemming, it is now possible to link deliveries for paper prescriptions, (received in an M8 message) to a local LIB item. These can not be linked to e-resepts, neither from samstemming or andre forskrivninger

[RENO-13330, Testing, As a samstemming user, I want to link paper prescription deliveries]

Deliveries for paper prescriptions, received in an M8 message are now shown in the Samstemming window. They can then be imported from there into the patient's local LIB.

[RENO-13329, Testing, As a samstemming user, I want to import paper prescription deliveries]

When doing KJ lookup the FM will process incoming deliveries (M8.1) if the delivery hasn't been processed before.

[RENO-13327, Testing, As a user, I want to see delivery information received from the KJ]

The FM can now receive recalls via KJ lookups and will store recall information for locally known items in the same way as when receiving an M7 ("Slettet resept i RF").

[RENO-13326, Testing, As a user, I want to see recall information received from the KJ]

Call legemiddelvarsling service with last kj lookup time.
Only check patients that have used kj lookup, when checking whether they need attention.

[RENO-13319, Testing, As the EPJ, I want LesPasientStatus to take into account when the last KJ lookup was made]

User are able to add, link and recall discarded items.

[RENO-13300, Testing, As a user, I want to add, link or recall a discarded prescription]

In PLO installation nurses can accept / reject suggestions which do not require a recall.

[RENO-13295, Testing, As a nurse in a PLO, I want to accept some drafts]

Customer Defect

Prescription that have been received from both sources (KJ/RF) are now showed as having RF as source.

[RENO-13571 (144509), Resolved, Bug 144509: KJ source isn't updated to RF for resepter in samstemming and in AF]

Error no longer occurs when discarding in samstemming and leaving the comment field empty

[RENO-13570 (144464), Resolved, Bug 144464: Obj ref error occurs when discarding in samstemming and leaving the comment field empty]

LIB-responsible doctor in a PLO-installation can no longer sign/send prescriptions when there are "ekspederbare"/"under ekspedering"- prescriptions under AF that are discarded

[RENO-13561 (144353), Resolved, Bug 144353: LIB-ansvarlig doctor in PLO can sign and send m25.1 when there are discarded ekspederbar/under eksp resepter in AF]

Stop showing samstemming on automatic KJ lookups when there aren't any unmatched external items that should be handled manually

[RENO-13557 (144167), Resolved, Bug 144167: Automatic KJ lookup triggers an automatic samstemming when there is no mismatch between local and external items]

KJ lookup date is now updated in time to be seen in samstemming window which can open immediately after lookup.

[RENO-13607 (Bug 145320), Testing, Bug 145320: Automatic KJ lookup opens samstemming automatically without updating the date and time shown for last KJ lookup]

When midwife links a doctor-prescription to a local midwife-prescription and then hits "Angre", both the link-draft and the local prescription no longer disappear from AF/LIB respectively . This might have been fixed by the changes under rev. 15478

[RENO-13585 (144648), Testing, Bug 144648: When midwife links a doctor-prescription to a local midwife-prescription and then hits "Angre", both the link-draft and the local prescription disappears]

Paper prescriptions coming in on KJ in an M8.1 (delivery) now show up in "samstemming".

[RENO-13584 (144635), Testing, Bug 144635: Paper M8 aren't showing KJ as a source in samstemming]

Fixed local prescriptions disappearing from the LIB and AF after rejecting linking draft prescriptions.

[RENO-13565 (Bug 144373), Testing, Bug 144373: When nurse 1 links an eRp to a Reg in the local LIB and nurse 2 rejects, the local Reg disappears from LIB but is shown in the detail screen for the external resept and the link function in AF is not active]

The Error message shows the fail code and fail string

[RENO-13563 (144334), Testing, Bug 144334: Incomplete error message when a user tries to lookup from KJ but isn't allowed to do so by KJ]

Defect

The FM can be configured to direct the user to handle the items in "andre forskrivninger" if they exceed a certain count (configured in admin).
Now the count is taken as the number of items which do not have a stop date and are not discarded.

[RENO-13599, Resolved, The popup warning the user about unhandled items in AF is not behaving as it should]

Under ekspedering prescriptions in AF with recall should not block M25.1 sending.

[RENO-13596, Resolved, CLONE (4.1) - A recalled resept which is under ekspedering is blocking the sending of m25.1]
