Forskrivningsmodulen (e-resept) 4.3.0 RC2 (#16934)

Release Notes

26.8.2018

Customer Defect

When warning about prescription time periods that span whole year(s), 12 months, 52 weeks or 365 days are considered mean the same period. Same goes for a single month, 4 weeks and 28-31 days.

[RENO-14866 (Bug 180709), Resolved, Bug 180709: Wrong warning in FM when renewing a prescription with "gyldighet" 52 weeks and the new prescription has the same "gyldighet"]

In dentist installations, dentists can no longer create drafts, as this can lead to change suggestions to prescriptions which require a recall from an installation where no doctor is available to accept or reject.

[RENO-14864 (Bug 180551), Resolved, Bug 180551: Dentist in Dentist installation should not be allowed to import prescriptions from AF made by doctor. In this case the "Legg til" button should be inactive with a tooltip to explain. FM throws error]

Fixed null reference exception when opening "samstemming" after importing a preparation and then subsequently removing the lib.

[RENO-14861 (Bug 179963), Resolved, Bug 179963: FM throws error message when user try to open samstemming after using "Fjern Lokal LIB" on patient that has used the Erstatt lokal LIB med PLL, and there is a Magistrelt legemiddel importet in samstemming]

Undoing a renew draft based on a locally deleted history data no longer ends in an exception, and undoing the renewals should work as expected.

[RENO-14847 (Bug 179876), Resolved, Bug 179876: Error when doctor or assistant regrets renewing of prescription from LIB history after "Fjern Lokal LIB" is used]

Defect

When renewing an item to an AK journal the FM no longer creates a new treatment but simply renews the item into an AK journal using existing treatment.

[RENO-14855 (Bug 180831), Resolved, Import+renew draft chain can leave two resepter for Marevan in the LIB]

When a lib responsible doctor deletes an item from LIB which has never been in any m25 message, it will not be included as stopped in the next and should not yield a pending m25 on signing queue.

[RENO-14839, Resolved, It's possible to delete an unsent resept in LIB-ansvarlig installation resulting in an error]

The double signing privileges for nurses, helseøstre and midwifes have been reset to "no". This means that if a "sykepleier", "jordmor" or "helsesøster" should be able to double sign an FM admin will need to manually set those privileges again.

[RENO-14826, Resolved, Default value for double-signing is set to Yes for helsesöstre, midwifes and nurses]

Work Request

EPJ API documentation updated to reflect latest API namespace version.

[RENO-14843, Resolved, Update EPJ API documentation for namespace version 2018-05-03]
