## Customer Feature (16)

---

When a Lib responsible doctor rejects an add to Lib question, the prescription is included in the next PLL as rejected. Also when an older unprocessed M25.1 comes in an RF query, the FM now reprocesses the latest PLLs if the newest was an M25.2 and compares to the older PLL.

Changed the organization and timestamp for 'Bekreft seponering' questions to match the data from the M25.1  
[RENO-16762, [Seponeringsinformation not shown to a MD-doctor if latest M25 is from the pharmacy](#)]

Making sure that the administration setting on a libitem keeps its value after updating the treatment.  
[RENO-16800, [As a user, I don't want external renewals to overwrite a locally registered administration value](#)]

When PLL is disabled on a doctor a recall option for external items in samstemming is available.  
[RENO-16878, [As a user, I should be able to directly recall an incoming PLL resept, in institutions where PLL is disabled](#)]

Changing the placement of the resept filter in samstemming and making those filters consist of checkboxes instead of a dropdown menu.  
[RENO-16910, [As a user, I want the resept filter in samstemming to be more intuitive](#)]

For PLL installations where the user should maintain a PLL for patient the FM now allows the user to send a PLL without any changes.  
[RENO-16926, [Sending new M25.1 without changes](#)]

When an AK journal draft is accepted by a second nurse or doctor a popup appears asking the user if they want the AK journal to be printed.  
[RENO-17005, [As a user, I want a reminder to print out AK journal when I accept an AK prescription draft](#)]

Changing the meaning of "stop date" from "Seponeringsdato" to "Siste dose tas".  
[RENO-17058, [As a user, I want the meaning of "stop date" to be more clear](#)]

Making the field "Resepten er gyldig til og med" invisible in the prescription window when user selects "Registrering i Lib" or the selected medication is a supplement.  
[RENO-17067, [As a doctor, I don't want to specify validity time of non-resept prescriptions](#)]

In dynamic reports stop date can now be selected to be included in reports and sorting order by "Bruk" has been corrected.  
[RENO-17099, [As a user, I want to include stop date on the Fylkesmann report](#)]

Showing in Samstemming if message was sent from an MD-Responsible doctor or PLL doctor.  
[RENO-17197, [As a user, I want to see if the M25.1 is from an MD-doctor or PLL-doctor](#)]

It is now possible to recall an external eRp matching a local renewal to registration in "samstemming"  
[RENO-17229, [As a doctor, I want to be able to recall a PLL prescription in samstemming that cannot be imported](#)]

Making it possible to renew a prescription without selecting a new refusjons kode when the imported one isn't available in the current installation.  
[RENO-17237, [As a user, I should not be forced to change refusjons code when importing/renewing](#)]

New definitions of m95/m96 have been added and code generated for those messages.  
[RENO-17284, [As the FM, I want to use the new M9.5/M9.6 for RF lookups](#)]

The FM now handles "Fornyng" information it can receive in a reply from RF (M9.6)  
[RENO-17286, [As a user, I want resept renewals to be automatically linked during RF lookups](#)]

Make user able to import medication that doesn't exist in local fest or is expired. On renew or renew with change, change said medication and renew it with change in both cases.  
[RENO-17355, [As a user, I don't want to see a warning popup when importing a medication that either doesn't exist in local FEST or is expired](#)]

Not showing warning when closing FM if the only unsent message is a PLL  
[RENO-17444, [As a doctor, I do not want to see a warning when closing FM if the only unsent message is a PLL](#)]

## Feature (2)

---

In the prescription view, the valid through date is changed to the stop date when stop date changes.  
[RENO-17016, [As a prescriber, I don't want the resept to be valid longer than the treatment stop](#)]

Setting the validity date to its initial state if the stop date is cleared

[RENO-17406, [Validity time is kept when clearing the stop date](#)]

## Customer Defect (11)

---

Fixed lib row details comment box visibility after answering "other" type question.  
[RENO-16644, [Answer for "Other" question is not shown in the LIBRowDetails in FM](#)]

locally linked kortdoses are properly removed from FEST data when kortdose is no longer found in FEST data.  
[RENO-16917, [Cannot prescribe a medication if user has linked it to a kortdose which is later removed from FEST](#)]

When a selected "refusjon" affects a prescription expire time the initial time should be set again on "de-selecting" the refusjon.  
[RENO-16945, [Missing calculation of the default resept expire time when removing refusjon](#)]

Fixed explicit linking via import button when import requires a prescriptions change/renewal  
[RENO-17051, [Two new resepts are created when renewing in the MD installation](#)]

Changing label in samstemming for PLL  
[RENO-17089, [FS: Change text in samstemming for empty PLL](#)]

Displaying question mark on PLL in the samstemming window when an MD-doctor has sent an MD-pharmacy a message or question.  
[RENO-17102, [Question mark not shown on an item in samstemming that has a comment from a MD-doctor to a MD-pharmacy](#)]

The samstemming view was not always showing external and locked prescriptions for patients that have an updated PID, has been fixed.

When a user is shown asked to supply reference numbers in a dialog which has an RF query button, pressing that button will force a new RF query.  
[RENO-17248, [Locked prescription not shown in samstemming when patient's PID has changed](#)]

Specific issue fixed in 17346.  
The checkbox isn't working correctly for resepter not in RF on this branch.  
This has been fixed here in <https://support.thula.is/browse/RENO-17366>  
[RENO-17365, [Not able to uncheck "Tilbakekall fra RF" when trying to seponate in samstemming](#)]

Steps taken to make sure PLL registrations get persisted as new treatments in case they have been renewed by non PLL doctors to "eresept" but are still included in PLL messages from PLL doctors.  
[RENO-17372, [RC6\\_samstemming\\_non\\_PLL\\_doctor](#)]

Disabling the Samstemming button after sending the first PLL, until a new RF lookup has been done.  
[RENO-17468, [Possible to remove local LIB for a PLL patient](#)]

Making removed but not recalled pll prescriptions able to be recalled  
[RENO-17608, [CLONE \(4.11\) - Retest RENO - 17340 in RC6](#) ]

## Defect (5)

---

Removed "Ikke Inkluder" buttons in AF for NIB, FIB and Vaccines  
[RENO-16857, [The "Ikke inkluder" button is still visible in FM for NIB, FIB and vaccines](#)]

Hiding recall in samstemming when local instance exists except when local is stopped  
[RENO-17491, [Undoing recall for a loose prescription in samstemming sends the item in the PLL section](#)]

Updating text above AF correctly  
[RENO-17497, [Text above AF does not update based on conditions](#)]

Fixed the removal of some lib items after sending a PLL

[RENO-17565, Kur registration with stop date set today (midnight) disappears from LIB after sending PLL]

A notification saying item won't be recalled is triggered and item isn't added to the queue upon an erp->reg renew for NIB and FIB when done as a draft by a nurse in PLO

[RENO-17653, M5 is added to sign/send queue in PLO when NIB/FIB is being renewed as draft by a nurse]
