Release Notes

Version | **4.12.0 RC5 (#19753)**
Release date | **20.03.2023**

Customer Defect (5)

Forward stop information if it is present in imported M25 item and the prescription has stop information
[RENO-17216, Missing Rolle element for "stopped by" in M25.1]

When replacing local LIB with PLL any local drafts should now be rejected before replace.
[RENO-17712, Locally created drafts are seen in samstemming as loose prescriptions when doctor has replaced local LIB with PLL]

Prescriptions from a PLL, renewed in a non PLL installation should now correctly show as a part of PLL when coming in on a query where none of the prescriptions are known locally.
[RENO-17739, Renewed PLL items_recalled from AF_incorrect outgoing PLL]

Don't block a user from being able to send by considering discarded rf items unable to be imported as handled
[RENO-17784, MD doctor blocked from sending updated M25.1 because of discarded items in AF]

Fixed detecting when items share a treatment via "Resept Id" and "New Resept Id" and made "Update" action in "Samstemming" available when such items are matched and local item is a draft.
[RENO-17795, Renewed eRp do not match original item if nurse have done renew of original eRp to Reg (draft)]
