Forskrivningsmodulen (e-resept) 4.9.104 (#19161),

Release Notes

15.12.2021

Customer Defect

Fixed incorrect LesVarerIBruk output when a treatment chain contains a resept that is renewed to a registration by a nurse (generating a draft reg)

[RENO-16977 (647463), Resolved, CLONE (4.9.6) - [Support 647463] Integrasjon mot FM]

Fixed LesVarerIBruk returning active iRp for a stopped treatment chain

[RENO-16976 (676820), Resolved, CLONE (4.9.6) - LesVarerIBruk is returning items that have been imported, renewed and stopped]

Defect

When the dose converter returns a "kortdose" that is not recognized locally the FM ignores it and uses information entered by user directly. Same applies for locally known kortdoses that do not have any structured dosing stored locally.
Dose converter updated to use the latest FEST version.

[RENO-16975, Resolved, CLONE (4.9.6) - Simple structured dose grid is not accepting new and changed values causing different dose to be saved]
