

Forskrivningsmodulen (e-resept) 4.9.105 (#19236),

Release Notes

18.2.2022

Customer Feature

The FM now skips unrecognized address types coming in from address registry service when persisting.
[RENO-17097, Resolved, Error in AR lookup when the result includes an invalid user address]

Customer Defect

Fixed MD doctor overriding libid from pharmacy when MD has not sent out the first m251 after MD registration and an incoming resepter from async m25.2 is matched by reseptid.

[RENO-17053 (268306), Resolved, LIB-id mottatt i M25.2 fra apotek byttes ut med annen LIB-id når element returneres i neste M25.1]

Fixed defect: In a PLO installation after a doctor changes administration on a draft a nurse registered, a second nurse can now accept if user privileges otherwise allow it.

[RENO-17046 (697873), Resolved, FS: [Support 697873] E-resept FM - Ikke mulig å godkjenne]

in LesVarerIBruk an iRp belonging to a stopped treatment and updated after the supplied Start Time is no longer incorrectly included in the results.

[RENO-17045, Resolved, FS: Resultat spørring løpenr 8359]
