

4.9.7 (#19326)

Release Notes

6.4.2022

Customer Defect

For a patient that has no PLL but is handled by a PLL doctor the remove whole lib operation in "samstemming" is now available if the signing queue is empty.

[RENO-17200, Resolved, PLL doctor cannot empty LIB of non-PLL patients]

Whole lib operations are now available regardless of PLL pending status

[RENO-17206, Resolved, Doctor not able to replace local LIB with PLL]

On sign and send callback the lib item list is no longer filtered for deleted items, except for loose(non PLL) registrations not in LIB.

[RENO-17220, Resolved, Prescriptions in AF disappears after choosing "Fjern lokal LIB" and doctor sends new M1.]

Customer Feature

A user can use the "sammstemming" actions that replace the whole lib, if signing queue is empty or only contains pending PLL messages.

[RENO-17208, Resolved, CLONE (4.11) - PLL doctor is not able to "Erstatt lokal LIB med PLL" when nurse has added item to the LIB]

A user can use the "sammstemming" actions that replace the whole lib, if signing queue is empty or only contains pending PLL messages.

[RENO-17208, Resolved, CLONE (4.11) - PLL doctor is not able to "Erstatt lokal LIB med PLL" when nurse has added item to the LIB]

A user can use the "sammstemming" actions that replace the whole lib, if signing queue is empty or only contains pending PLL messages.

[RENO-17208, Resolved, CLONE (4.11) - PLL doctor is not able to "Erstatt lokal LIB med PLL" when nurse has added item to the LIB]

Popup text changed when offering to create PLL before sign and send.

[RENO-17221, Resolved, CLONE (4.11) - As a PLL-enabled doctor, I want a different information text when creating PLL during sign&send]
