

Forskrivningsmodulen (e-resept) 4.10.0 RC2 (#18732)

Release Notes

13.1.2021

Customer Defect

When the configuration «Håndtering av varsler påkrevd ved forskrivning, fornying og import» is set to «NO». Doctors are no longer required to handle warnings when creating new prescriptions until sending PLL message.

[RENO-16410, Resolved, [BUG 242812] Doctor must handle double-medication warning when prescribing when parameter is set to No]

Importing a "not in rf" item as a non doctor should yield an "iReg" state in LIB now.

[RENO-16140 (228386), Resolved, VS: 228386 - Import Erp and renew with change in PLO installation]

Defect

Null reference exception when importing an item that triggers a cave warning fixed.

[RENO-16421, Resolved, Exception occurs when importing item from RF that triggers CAVE warning]

Fixed a problem where it was possible to send a new PLL message when there was an active resept in AF

[RENO-16395, Resolved, Possible to send PLL when there is active resept in AF]

Fixed a problem where it was not possible to send to RF after linking a prescription from AF, with edited CAVE info in PLL

[RENO-16394, Resolved, Linking a prescription from AF, with edited cave in PLL, as head over recalled previous blocks sign / send]

Work Request

4.9 branch merge to trunk (4.10)

[RENO-16348, Resolved, Merge from 4.9.2]
