Forskrivningsmodulen (e-resept) 4.4.1 RC1 (#17122)

Release Notes

24.1.2019

Feature

Adding "Verbose" logging and tracing to a file will generate an event log which has has extensive details on "HelseId" token access and use when doing KJ lookups and "HelseId" login when tracing out event logs on "Verbose" level. The log generated will be very detailed so it helps to know the trace events have event numbers, 20273 and 20274, and names which start with "HelseId".

[RENO-15083, Resolved, As a tester, I want to see a detailed log of FM/HelseId/KJ communication]
