

Forskrivningsmodulen (e-resept) 4.5.1 (#18133)

Release Notes

5.2.2020

Customer Feature

AK journals with incomplete dosing can not be sent out in a multidose message.

[RENO-15913 (202160), Resolved, CLONE (4.8) - 202160 - An Reg with AK-journal and "?" in dosing is sendt out with stop date in M25.1]

Customer Defect

For PLO installations when changing "Administrering" on lib item an error that could be raised, for no apparent reason, and shown in dialog has been fixed.

[RENO-15911 (Support 513259), Resolved, Error when updating "administrering" in the LIB row details view]

Fixed a problem where LesVarerIBruk would return an error when called with parameters VibStart/VibStop or VibDato and the patient has linked prescription in the local LIB. LesVarerIBruk should now be more stable when calling the method for a date range.

[RENO-15898 (Support 507932), Resolved, LesVarerIBruk returns an error for some patients]
