

Forskrivningsmodulen (e-resept) 4.7.1 RC2 (#18241)

Release Notes

29.4.2020

Customer Defect

Bugfix:

For patients with locked prescriptions not included in RF lookup, there was a chance the FM would regard it as a limited RF lookup, which happens when a user has been blocked and can only see prescriptions created by the same user. This could send the FM into an inconvenient state where drug deliveries were not lookup up on medication import, and possibly some other side effects.

[RENO-16112 (226000), Resolved, FM is not sending M9.7 when importing a resept to LIB]
