

# Forskrivningsmodulen (e-resept) 4.9.2 (#18723)

## Release Notes

18.12.2020

## Customer Feature

---

"Rapport til Fylkesmann" now returns a medication list comprised of the same prescriptions as a call to "Les varer I bruk" for a date range.

[ RENO-16346, Resolved, As a doctor, I want the Fylkesmann report to show all prescriptions in LIB in the given period ]

## Customer Defect

---

When calling EPJ API web service the institutions context is read from login info if necessary.

Remember to provide an existing HerId for the institution if more than one exists in db.

As this is not one the Start\* methods, the "Organisasjon" element, if present, is ignored so a valid HerId is necessary.

[ RENO-16358, Resolved, Meona: Overføring av LIB til FM - gir HTTP-500 feil ]

Fixed exception when printing LIB til PLO for patients without "fastlege"

[ RENO-16342, Resolved, Error in PLO printouts when patient has no fastlege ]
